

- 6 a) establishing a communication channel between the first network node and the
7 second network node;
8 b) establishing a first stream between the first process and the communication
9 channel;
10 c) establishing a second stream between the second process and the
11 communication channel;
12 d) in response to the data being written to the first stream, encrypting the data to
13 generate encrypted data, [to be transmitted between the first and second
14 processes,] the encrypting of the data being performed independent of any
15 communication protocols used to transport the encrypted data from the first
16 network node to the second network node; [the at least one communication
17 protocol supported by the first and second network nodes;
18 e) writing the encrypted data to the first stream;]
19 [f] e) causing the encrypted data to be transmitted from the first network node to
20 the second network node according to the at least one communication
21 protocol supported by the first and second network nodes; and
22 [g] f) in response to the encrypted data being read from the second stream,
23 decrypting the encrypted data to recover [reading the encrypted data from the
24 second stream; and
25 h) decrypting the encrypted data to obtain] decrypted data which is identical to
26 the data on the first network node before the data was [encrypted.] written to
27 the first stream, the decrypting of the encrypted data being performed
28 independent of any communication protocols used to transport the encrypted
29 data from the first network node to the second network node.

1 2. (UNAMENDED) The method of Claim 1, further including the steps of
2 a) performing a communication protocol-specific encryption of the data on the
3 first network node, and
4 b) performing a communication protocol-specific decryption of the data on the
5 second network node.

1 3. (AMENDED) The method of Claim 1, wherein the communication channel is a Java
2 secure channel,
3 wherein the first stream is a first Java stream,
4 wherein the second stream is a second Java stream,
5 wherein the step of establishing a communication channel between the first and
6 second network nodes further comprises the step of establishing a Java secure
7 channel between the first and second network nodes,
8 wherein the step of establishing a first stream between the first process and the
9 communication channel further comprises the step of establishing a first Java
10 stream between the first process and the Java secure channel, and
11 wherein the step of establishing a second stream between the second process and the
12 communication channel further comprises the step of establishing a second
13 Java stream between the second process and the Java secure channel.
14 [channel,
15 wherein the step of writing the encrypted data to the first stream further comprises
16 the step of writing the encrypted data to the first Java stream, and

B²
cont

17 wherein the step of reading the encrypted data from the second stream further
18 comprises the step of reading the encrypted data from the second Java
19 stream.]

1 4. (UNAMENDED) The method of Claim 1, wherein the communication channel is a
2 Java secure channel, wherein the first stream is a Java stream,
3 wherein the second stream is a Java stream,
4 wherein the method further comprises the step of connecting the Java secure channel
5 to a third Java stream, and
6 wherein the third Java stream provides for the transmission of data according to a
7 specific communication protocol.

B³

1 5. (TWICE AMENDED) A computer-readable medium carrying one or more
2 sequences of one or more instructions for providing communication protocol-
3 independent security for data transmitted between a first process, executing on a first
4 network node, and a second process, executing on a second network node, wherein
5 the first network node and the second network node each support at least one
6 common communication protocol, the one or more sequences of one or more
7 instructions including instructions which, when executed by one or more processors,
8 cause the one or more processors to perform the steps of:
9 a) establishing a communication channel between the first network node and the
10 second network node;
11 b) establishing a first stream between the first process and the communication
12 channel;

13 c) establishing a second stream between the second process and the
14 communication channel;
15 d) in response to the data being written to the first stream, encrypting the data to
16 generate encrypted data, [to be transmitted between the first and second
17 processes,] the encrypting of the data being performed independent of any
18 communication protocols used to transport the encrypted data from the first
19 network node to the second network node; [the at least one communication
20 protocol supported by the first and second network nodes;
21 e) writing the encrypted data to the first stream;]
22 [f] e) causing the encrypted data to be transmitted from the first network node to
23 the second network node according to the at least one communication
24 protocol supported by the first and second network nodes; and
25 [g] f) in response to the encrypted data being read from the second stream,
26 decrypting the encrypted data to recover [reading the encrypted data from the
27 second stream; and
28 h) decrypting the encrypted data to obtain] decrypted data which is identical to
29 the data on the first network node before the data was [encrypted.] written to the first
30 stream, the decrypting of the encrypted data being performed independent of any
31 communication protocols used to transport the encrypted data from the first network
32 node to the second network node.

1 6. (UNAMENDED) The computer-readable medium of Claim 5, wherein the
2 computer-readable medium further includes instructions for performing the steps of

- 3 a) performing a communication protocol-specific encryption of the data on the
4 first network node, and
5 b) performing a communication protocol-specific decryption of the data on the
6 second network node.

1 7. (AMENDED) The computer-readable medium of Claim 5, wherein the first stream
2 is a first Java stream,
3 wherein the second stream is a second Java stream,
4 wherein the step of establishing a communication channel between the first and
5 *B4* second network nodes further comprises the step of establishing a Java secure
6 channel between the first and second network nodes,
7 wherein the step of establishing a first stream between the first process and the
8 communication channel further comprises the step of establishing a first Java
9 stream between the first process and the Java secure channel, and
10 wherein the step of establishing a second stream between the second process and the
11 communication channel further comprises the step of establishing a second
12 Java stream between the second process and the Java secure channel.
13 [channel,
14 wherein the step of writing the encrypted data to the first stream further comprises
15 the step of writing the encrypted data to the first Java stream, and
16 wherein the step of reading the encrypted data from the second stream further
17 comprises the step of reading the encrypted data from the second Java
18 stream.]

1 8. (UNAMENDED) The computer-readable medium of Claim 5, wherein the
2 communication channel is a Java secure channel,
3 wherein the first stream is a Java stream,
4 wherein the second stream is a Java stream,
5 wherein the computer-readable medium further includes instructions for connecting
6 the Java secure channel to a third Java stream, and
7 wherein the third Java stream provides for the transmission of data according to a
8 specific communication protocol.

1 9. (CANCELLED) A communication network providing communication protocol-
2 independent secure communication between a first network node and a second
3 network node, wherein the first network node and the second network node each
4 support at least one common communication protocol, wherein the first network
5 node is communicatively coupled to the second network node by a communication
6 channel, the communication network comprising:
7 a) a first process executing on the first network node, wherein the first process is
8 configured to provide for the encryption of data independent of the at least
9 one communication protocol;
10 b) a first stream which provides for the transfer of encrypted data between the
11 first process and the communication channel;
12 c) a second process executing on the second network node; and
13 d) a second stream which provides for the transfer of encrypted data between the
14 communication channel and the second process, wherein the second process

15 is configured to provide for the decryption of data which has been encrypted
16 by the first process.

1 10. (CANCELLED) The communication network of Claim 9, wherein the second
2 process further includes the capability to decrypt data based upon any
3 communication protocol supported by the second network node.

1 11. (CANCELLED) The communication network of Claim 9, wherein the
2 communication channel is a Java secure channel, the first stream is a Java stream and
3 the second stream is a Java stream

1 12. (CANCELLED) The communication network of Claim 11, further comprising a
2 third Java stream connected to the Java secure channel, the third Java stream
3 providing for the transmission of data according to a specific communication
4 protocol.

1 13. (TWICE AMENDED) A computer data signal embodied in a carrier wave and
2 representing sequences of instruction which, when executed by one or more
3 processors, provide communication protocol-independent security for data
4 transmitted between a first process, executing on a first network node, and a second
5 process, executing on a second network node, according to at least one common
6 communication protocol supported by the first and second network nodes, by
7 performing the steps of:
8 a) establishing a communication channel between the first network node and the
9 second network node;

- 10 b) establishing a first stream between the first process and the communication
11 channel;
- 12 c) establishing a second stream between the second process and the
13 communication channel;
- 14 ^{D4} d) in response to the data being written to the first stream, encrypting the data to
15 generate encrypted data, [to be transmitted between the first and second
16 ^{B5} processes,] the encrypting of the data being performed independent of any
17 ^{an't} communication protocols used to transport the encrypted data from the first
18 network node to the second network node; [the at least one communication
19 protocol supported by the first and second network nodes;
- 20 e) writing the encrypted data to the first stream;]
- 21 [f] e) causing the encrypted data to be transmitted from the first network node to
22 the second network node according to the at least one communication
23 protocol supported by the first and second network nodes; and
- 24 [g] f) in response to the encrypted data being read from the second stream,
25 decrypting the encrypted data to recover [reading the encrypted data from the
26 second stream; and
- 27 h) decrypting the encrypted data to obtain] decrypted data which is identical to
28 the data on the first network node before the data was [encrypted.] written to
29 the first stream, the decrypting of the encrypted data being performed
30 independent of any communication protocols used to transport the encrypted
31 data from the first network node to the second network node.

1 14. (UNAMENDED) The computer data signal of Claim 13, wherein the computer
2 sequence of instructions further includes instructions for performing the steps of
3 a) performing a communication protocol-specific encryption of the data on the
4 first network node, and
5 b) performing a communication protocol-specific decryption of the data on the
6 second network node.

1 15. (AMENDED) The computer data signal of Claim 13, wherein the first stream is a
2 first Java stream,
3 wherein the second stream is a second Java stream,
4 wherein the step of establishing a communication channel between the first and
5 *Bb* second network nodes further comprises the step of establishing a Java secure
6 channel between the first and second network nodes,
7 wherein the step of establishing a first stream between the first process and the
8 communication channel further comprises the step of establishing a first Java
9 stream between the first process and the Java secure channel,
10 wherein the step of establishing a second stream between the second process and the
11 communication channel further comprises the step of establishing a second
12 Java stream between the second process and the Java secure channel.
13 [channel,
14 wherein the step of writing the encrypted data to the first stream further comprises
15 the step of writing the encrypted data to the first Java stream, and

16 Bb wherein the step of reading the encrypted data from the second stream further
17 ant comprises the step of reading the encrypted data from the second Java
18 stream.]

1 16. (UNAMENDED) The computer data signal of Claim 13, wherein the
2 communication channel is a Java secure channel,
3 wherein the first stream is a Java stream,
4 wherein the second stream is a Java stream,
5 wherein the computer sequence of instructions further includes instructions for
6 connecting the Java secure channel to a third Java stream, and
7 wherein the third Java stream provides for the transmission of data according to a
8 specific communication protocol.

1 17. (AMENDED) A method for providing communication protocol-independent
2 security for data transmitted by a process executing on a network node, the method
3 comprising the steps of:
4 a) establishing a stream between the process and a communications
5 [communication] channel; and
6 b) in response to the data being written to the stream, encrypting the data to
7 generate encrypted data, [be transmitted by the process,] the encrypting of the
8 data being performed independent of any communications protocol used to
9 transport the encrypted data on the communications channel. [a
10 communication protocol supported by the network node;
11 c) writing the encrypted data to the stream; and

12 d) causing the encrypted data to be transmitted from the network node to the
13 communication channel.]

1 18. (AMENDED) The method of Claim 17, wherein the communications
2 [communication] channel is a Java secure channel,
3 wherein the stream is a first Java stream, and
4 wherein the step of establishing a stream between the process and the
5 communications [communication] channel further comprises the step of
6 establishing a Java stream between the process and the Java secure channel.
7 [channel, and
8 wherein the step of writing the encrypted data to the stream further comprises the
9 step of writing the encrypted data to the Java stream.]

1 19. (UNAMENDED) The method of Claim 17, wherein the communication channel is a
2 Java secure channel, wherein the stream is a Java stream,
3 wherein the method further comprises the step of connecting the Java secure channel
4 to a second Java stream, and
5 wherein the second Java stream provides for the transmission of data according to a
6 specific communication protocol.
